

Play the SAFE Board Game Online

The SAFE Board game can also be played in an online environment.

We suggest using the website <https://playingcards.io> for playing the board game online. You can create a room for free as a host and keep it online for 30 days. After 30 days of inactivity, the room is deleted.

To import the game materials and set-up, you need to click the Import button on the top right of the screen (see image below), select and upload the *.pcio file that you can download in your preferred language [here](#).

If you want to adjust anything on the board (like the card positions, the timer etc. You need to click on the briefcase icon on the left side to enter the editing mode. After making all the required adjustments, you click on it again to exit editing mode.

When you are ready to start playing, you can share the link to the room or the room code with your participants and invite them to an online meeting through Zoom, Skype, Google Meet or any other platform of your choice.

Character Creation

There are a few ways to create the characters for each player while playing online:

- a) The participants can print the Character Sheets beforehand and have pen and paper available.
- b) The Game Master can fill in the Character Sheets and share them as images with the participants.
- c) An online tool (such as Mural or Google Docs) can be used to assist the online Character Creation.

Affected by Challenges

In the online version, each player has their own pawn to place on the board.

When a player is affected by a challenge, they stop moving their pawn with the rest of the group until the challenge is resolved. The participants should have pen and paper available to write down the challenges they are currently facing, or the Game Master can keep track of the challenges in a shared document online.
